

PULLING STRENGTH

FOREST FMS® 45° PULLEY

MAXIMUM LOAD CAPACITY OF THE SHUTTLE® M MOTOR

The Forest FMS® 45-degree pulley is an adjustable pulley designed for use with the motorised FMS track when it is installed at an angle. By using this pulley, the motor hangs vertically, allowing the curtain to run all the way to the wall. The motor can be hung at the top of the FMS® rail with the rail inclined up to 45 degrees, or it can be hung at the bottom of the FMS® rail with the rail inclined up to 45 degrees. The angle of inclination affects the load capacity of the Shuttle® M motor. Please refer to the maximum fabric weight for each angle:
